Professional Summary

Senior Machine Learning Engineer and physicist specializing in computer vision, 3D spatial data, and robotics applications. Build research-grade models and infrastructure that carry ideas from exploratory analysis to reliable, real-time deployment on robotic hardware, owning the full pipeline from data generation through model design, evaluation, and edge deployment. Combine an academic background in machine learning for high-energy physics with industry experience to deliver interpretable, production-ready systems for complex, sensor-rich environments.

Education

- | | |
|-------------|---|
| 2015 - 2021 | University of California, Irvine , Irvine, CA
<i>Ph.D. in Physics</i> |
| 2011 - 2015 | University of Hawaii, Manoa , Honolulu, HI
<i>M.S. in Physics</i> |
| 2005 - 2009 | Westminster College , Salt Lake City, UT
<i>B.S. in Physics, Minor in Mathematics and Music</i> |

Professional Experience

- | | |
|-------------------|--|
| 06/2022 - Present | Machina Labs
<i>Senior Machine Learning Engineer</i> <ul style="list-style-type: none">- Lead end-to-end ML for industrial robotic sheet-metal forming, from data collection and labeling to model design, evaluation, and deployment on edge devices.- Develop real-time models for anomaly detection, process control, and trajectory planning using time-series and 3D sensor data.- Design data and experimentation infrastructure (data warehousing, ETL, metrics, dashboards) to support rapid iteration and robust monitoring of ML systems in production.- Collaborate with robotics, controls, and software teams to integrate ML into safety-critical systems, including CI/CD and infrastructure-as-code for on-prem hardware. |
| 06/2015 - 06/2022 | University of California, Irvine
<i>Graduate Research Assistant & Postdoctoral Researcher</i> <ul style="list-style-type: none">- Researched deep learning and computer vision methods for particle-physics detectors, focusing on robust classification, reconstruction, and anomaly detection under real-world constraints.- Developed techniques for interpreting ML models and relating learned features to underlying physical mechanisms, improving trust and scientific insight.- Built end-to-end ML pipelines for large simulated and experimental datasets, covering data generation, preprocessing, feature engineering, model design, hyperparameter optimization, and uncertainty-aware evaluation.- Collaborated across international experimental collaborations and communicated ML results to both domain experts and non-specialists. |
| 08/2011 - 05/2015 | University of Hawaii, Manoa
<i>Graduate Research Assistant</i> <ul style="list-style-type: none">- Designed and implemented numerical simulations of Bose-Einstein condensates for a DoD-funded lattice-gas quantum computing experiment, bridging physics models and high-performance code.- Integrated analysis and trigger software with FPGA-based readout for a neutrino telescope, working across hardware, firmware, and scientific analysis teams. |
| 09/2009 - 05/2011 | Northrop Grumman Aerospace |

Systems Engineer

- Designed and deployed secure precision-time (PTP) radio networks for U.S. Air Force installations, focusing on reliability, timing accuracy, and security.
- Served as primary point of contact for network operations and reliability, tracking performance metrics and coordinating fixes with Air Force stakeholders.
- Held an active Secret security clearance.

Honors & Awards

- | | |
|-----------|--|
| 2020 | Chateaubriand Fellowship , Chateaubriand Fellowship
Prestigious fellowship awarded by the French Embassy to support research in machine learning and AI at a leading French institution. |
| 2016-2018 | NRT-DESE: Team Science for Integrative Graduate Training in Data Science and Physical Science , National Science Foundation
2 year NSF research grant for work in the interdisciplinary field of machine learning and the physical sciences. |
